**FEATURES**

- Min. 3/8" (10 mm) - add aggregates for thicker layer
- Resistant to high temperatures > 800°C (1500°F)
- Resistant to high thermal shock
- Resistant to Inorganic & Organic acids
- Resistant to combined Caustic & Acid environments
- Not attacked by Organic solvents
- Nonflammable & Nontoxic
- Bonds to wet surfaces
- Bonds to Chemically contaminated surfaces
- Less Expensive than complicated Polymer systems

**PRODUCT DESCRIPTION**

**Basic Use**

*Corro-Chem 200* has an excellent resistance to acid, and good resistance to caustic environment. It is used for protection of concrete slabs exposed to acidic and caustic spills and in secondary containment structures, and to repair concrete floors and loading docks exposed to acids. To use as acid resistant concrete, 3/8" (9 mm) pea gravel or 1/2" (6 mm) crushed granite stone is added (see Application). Contact Technical service for advice on continuous exposure to acid.

Most applications require only one coat.

*Corro-Chem 200* is less expensive than polymer based mortars (epoxy, urethane & polyester resin).

**Composition and Materials**

*Corro-Chem 200* is an inorganic mortar resistant to combined acid & caustic environments. *Corro-Chem 200* is supplied as 2-component kit, consisting of dry Comp. A + Liquid Comp. B.

**Limitations**

Do not apply *Corro-Chem 200* when temperature is expected to fall below 4°C (40°F) within 48 hours, or when rain is forecast. Follow Hot-Weather concreting precautions when temperatures exceed 25°C (77°F), or under sunny and windy conditions.

Refer to Chemical Resistance section for resistance details.

**Health and Safety**

Liquid Component B is an alkaline water solution. Use rubber gloves & protective goggles when mixing. Must avoid contact with eyes & prolonged contact with skin. If contact occurs, flush immediately with water. Seek medical advice if irritation occurs. Harmful if digested. Keep product out of reach of children. FOR INDUSTRIAL USE ONLY. Consult current SDS for health effects, precautions and first aid directions, before using *Corro-Chem 200*.

**Color**

Dark Gray.

**Packaging**

Dry Comp. A - 22.7 kg (50 lbs.) packaged in heavy-duty bags. Liquid Comp. B - 2.26 L (0.6 USG) is packaged in plastic jugs. Packaged 40 kits (Comp. A + B) per pallet.

**Yield**

Each Kit yields 11.9 L (0.42 ft³). In Horizontal applications, when extended with 19 lbs (9 kg) of 3/8" (9 mm) pea gravel or 1/2" (6 mm) crushed granite stone, it yields 15.6 L (0.55 ft³).

**Storage and Transportation**

*Corro-Chem 200* when stored on pallets in a dry cool area has 12-months shelf-life. Liquid Comp. B must be declared as DG.

**Chemical Resistance**

*Corro-Chem 200* resistance in acid environments is similar to conventional epoxy resins. It also resists to sodium hydroxide concentrations up to 20% concentration.

*Corro-Chem 200* bonds well to water saturated and chemically contaminated concrete surfaces, which is an advantage over polymer based mortars. Being fully “breathable” it will not debond due to entrapped moisture and capillary pressure at the concrete and *Corro-Chem 200* interface.

It is not resistant to acid fluorides or hydrofluoric acid.
To evaluate suitability of Corro-Chem 200 for specific project, supply the following information to Technical Service:

**Environment** - List of chemicals, their concentrations, exposure temperature, pH value, frequency of chemical attack and length of time between cleanup.

**Existing Concrete** - Type of structure, concrete compressive strength, degree of deterioration and contamination, any surface treatment & description of use.

**INSTALLATION**
Current Guide Specification & Application Instructions contain information specific to each application and must be followed. Consult Technical Service to ensure correct surface preparation, application procedures and cure requirements.

**Surface Preparation**
For most applications removal of 3-12 mm (1/8”-1/2”) of existing concrete is necessary, depending on deterioration, depth of contamination and specific application. Remove all delaminated, loose and contaminated concrete, grease, laitance, dirt and efflorescence using shotblast, sandblast, or high-pressure waterblast 24-35 MPa (3,500-5,000 psi) with sand injection at nozzle.

Contact Technical Service for detailed surface preparation procedures or to review alternative surface preparation methods.

**Crack Treatment**
Route cracks, approximately 4 cm (1 1/2”) wide and 2.5 cm (1”) deep, and fill with Corro-Chem 200 mortar.

**Mixing**
Use 12 mm (1/2”) drill with suitable mixing paddle. For larger quantities, use paddle or helix screw type mortar mixer. Place liquid Comp. B in the mixer and mix, while adding dry Comp. A into the liquid, Mix a minimum of five (5) minutes, until homogeneous & free of lumps. If “splitting” the kit is necessary, shake the liquid Comp. B before using. Convey mixed material to the point of placement in clean containers.

For horizontal applications 12-25 mm (½”-1”) thick, each Kit must be extended with 10.5 kg (23 lbs) of 6 mm (1/4”) crushed granite stone. For thicker layers, over 25 mm (1”), use 9 mm (3/8”) clean pea gravel, or 12 mm (½”) stone. To evaluate suitability of Corro-Chem 200 for specific project, supply the following information to Technical Service:

**Application**
Do not apply when the temperatures are expected to fall below 4°C (40°F) within 48 hours, or when rain is imminent. Follow hot weather concreting precautions when temperatures exceed 25°C (77°F), or under sunny and windy conditions.

Apply to a uniform specified thickness. Keep a wet edge. Apply by hand, or use screed to spread the material. Use steel trowel to finish horizontal & vertical surfaces. If thickness requirement exceeds 40 mm (1.5”), or when large variations in thickness are expected, contact Technical Service.

Construction (cold) joints, and control & expansion joints must be sealed. Contact Technical Service for further information.

**Min. Thickness** is 10 mm (3/8”) for Horizontal or Vertical use.

**Curing**
Protect against fast surface evaporation. Air dry cure for 72 hours prior to opening to traffic. When working under tarps at freezing temperatures, requiring heating, avoid using propane heaters.

**Clean Up**
Tools must be cleaned with water immediately after use. Cured material can only be removed mechanically.

**Shelf Life and Storage**
Corro-Chem 200, when properly stored on pallets in a dry, cool area, has a shelf life of 12 months. Liquid Comp. B must NOT freeze.

**AVAILABILITY AND COST**
Corro-Chem 200 is available worldwide. Contact the manufacturer for the name of the nearest Representative/Distributor for pricing information.

**MAINTENANCE**
None required.

**WARRANTY**
A limited twelve (12) month Material Replacement Warranty is available.

**TECHNICAL SERVICE**
For specification assistance, or suitability of Corro-Chem 200 for specific applications, and application instructions, contact Technical Service USA 888-443-6483 / Canada: 905-672-2020.

**Short Specification**
Acid resistant [coating] [topping] will be Corro-Chem 200, an inorganic mortar manufactured by Gemite Products Inc., [USA 888-443-6483] [Canada 905- 672-2020].

The performance data shown on the current Corro-Chem 200 Technical Data Sheet establishes project basis-of-design.
